Continuation of 11, does NOT place the application in condition for allowance because: The applicant has argued Allport does not disclose the control code being provided to the universal remote in a mark-up language. However, Hoffberg et al. cites "Alternatively, a modem or communication device could be used to obtain the time in digitally coded from over a network." . Therefore, Hoffberg teaches dowloading control code representing commands over a network.

Applicant also argued that Allport does not disclose specify in what capacity the IR command libraries are downloaded neither displaying panel and soft key locations which, when rendered on the GUI display panel, display icons and buttons in the same position. However, Allport teaches the remote control may be programmed using an integrated graphical keyboard for simple tasks such as entering and modifying passwords...but the latter is preferably done with the use of companion software using an IR keyboard in conjunction with the remote control's display or and the display would then show the association of physical or touch screen actuating buttons with the actual funcitons they perform...other universal remotes ...have a display so the buttons could be programmed allow greater functionality, and each button may correspond to serveral different funcitons depending on the mode setting of the remote".
